

ComicCraft – AI Comic Story Creator using Gemini Models

Team Size: 03 **Semester:** 03 **Department:** Computer Science with Artificial Intelligence

Team Members: Swathi S, Deepika L, Anishk M

Phase 1 – Brainstorming and Ideation

1. Problem Identification

Creating a comic story manually takes a lot of time. Users need to create:

- Story ideas
- Characters
- Dialogues
- Scenes
- Illustrations

ComicCraft will use AI to make this process easier.

2. Proposed Idea

ComicCraft is a web application where the user enters a simple story idea or prompt. The application uses Gemini AI to generate:

- Comic story
- Characters
- Scenes
- Dialogues
- Panel descriptions
- Image prompts

3. Main Features

1. User enters a story prompt.
2. AI generates a story.
3. AI divides the story into comic panels.
4. Each panel contains scene description and dialogue.
5. Images can be generated from the panel descriptions.
6. User can view and download the completed comic.

4. Basic Workflow

User Prompt → Gemini AI → Story Generation → Comic Panels → Illustrations → Final Comic

5. Technologies

Frontend: HTML, CSS, JavaScript

Backend: Python + FastAPI

AI Model: Google Gemini

Image Generation: Gemini/image-generation model or another image API

Output: Comic story / panels

Phase 1 Coding – Basic Prototype

main.py

```
from fastapi import FastAPI
from pydantic import BaseModel

app = FastAPI()

class StoryRequest(BaseModel):
    prompt: str

@app.get("/")
def home():
    return {
        "message": "Welcome to ComicCraft - AI Comic Story Creator"
    }

@app.post("/generate-story")
def generate_story(request: StoryRequest):

    prompt = request.prompt

    # Gemini API integration can be added here
    story = f"""
    Comic Story Idea:
    {prompt}

    Panel 1:
    Introduction of the main character.

    Panel 2:
    The main character faces a problem.

    Panel 3:
    The character tries to solve the problem.

    Panel 4:
    The problem is solved.

    Panel 5:
    Happy ending.
    """

    return {
        "prompt": prompt,
        "story": story
    }
```

Simple Frontend – index.html

```
<!DOCTYPE html>
<html>
<head>
    <title>ComicCraft</title>
</head>

<body>

    <h1>ComicCraft</h1>
    <h3>AI Comic Story Creator</h3>

    <textarea id="prompt"
        placeholder="Enter your comic story idea">
```

```

</textarea>

<br><br>

<button onclick="generateStory()">
  Generate Comic
</button>

<h2>Generated Story</h2>

<pre id="result"></pre>

<script>
  async function generateStory() {

    const prompt =
      document.getElementById("prompt").value;

    const response = await fetch(
      "http://127.0.0.1:8000/generate-story",
      {
        method: "POST",
        headers: {
          "Content-Type": "application/json"
        },
        body: JSON.stringify({
          prompt: prompt
        })
      }
    );

    const data = await response.json();

    document.getElementById("result").textContent =
      data.story;
  }
</script>

</body>
</html>

```

Expected Example

Input: A young girl discovers a magical book.

Output:

- Panel 1: A young girl finds an old book in the library.
- Panel 2: The book suddenly starts glowing.
- Panel 3: A magical world appears from the book.
- Panel 4: The girl enters the magical world.
- Panel 5: She becomes a hero and saves the magical kingdom.

Phase 1 Deliverables

- ✓ Project title finalized
- ✓ Problem identified
- ✓ Project idea finalized
- ✓ Main features identified
- ✓ Technology stack selected
- ✓ Basic application workflow prepared

✓ Initial frontend and backend prototype prepared

Phase 1 Conclusion

ComicCraft will use AI to convert a user's simple idea into an organized comic story and later generate visual comic panels.
